

Roaming around in the Millingerwaard

A scavenger hunt for adults

Field trip location: Millingerwaard, NL
Peek field trip code: 7844
Course: Restoration Ecology
Amount of followers: 120
Type of route: Free route with different random measurement locations

Case partner:

Short description of field trip:

The 120 students were taken to the Millingerwaard by buses - of course adhering to the covid-19 regulations. Here, they received the code for the app that took them to multiple geo locations in the nature area. Various assignments were given to them, like doing water quality measurements across the area, and climbing up on the highest dune of the area.

Inspiration:

During the trip, the students learned about Restoration Ecology in the area and the different management types that can be taken into consideration. As an example: they were asked to find vortex tracks at specific locations of the Dutch Beaver. A scavenger hunt for adults!

Form of transport:

Roaming around freely through the area

Fixed or own time:

At one specific day in 2021.
