

How high is that tree?

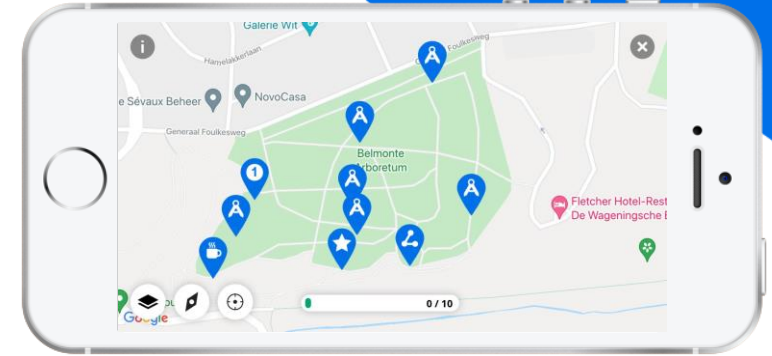

Skills training in the Arboretum

Field trip location: Arboretum, Wageningen, NL

Peek field trip code: * * * *

Amount of followers: 60

Type of route: Free route with competition between groups

Source: Resource

Short description of field trip:

If you are meeting a farmer telling you his field is about 2 acres, and you don't have a clue of the size of an acre, you might misinterpret anything related to what he/she is telling you. Estimation skills can be relevant to get a better understanding and feeling of heights, elevation, distances. In this field trip, which is actually a game, students are trained on these skills in a fun setting: outside, in a nice environment. At the end of the game, the team with most points wins!

Inspiration:

The game is not only used to train estimation skills, but at the same time encourage followers to discuss and decide in a short period of time, as the points per question go down per second..

Form of transport:

Strolling while enjoying the surroundings.

Fixed or own time:

The trip takes place in one afternoon with all groups running around through the park, increasing the feeling of a game.
